IOT SOFTWARE ENGINEER

Our company is looking for a IoT Developer to join our team.

Responsibilities:

- Provide production support.
- Help drive the technical design, ongoing configuration, testing, and maintenance of IOT applications (new deployments and enhancements);
- Serve as the subject matter expert for Kepware, Canary Historian and Thing Worx platforms.
- Create support documentation (design documents, training materials, job aids, etc.).

Requirements:

- Superior problem-solving skill.
- BS in Computer Science or Engineering, or equivalent experience.
- Strong communication skills – with users and technical and functional team.
- Prior experience working in operations related field, e.g., Manufacturing Industrial.
- Experience with software design methodologies.
- Knowledge of sensors/IoT connectivity, IoT platforms, data acquisition and Data Historians.
- 2+ years of experience in developing IoT solutions.
- Experience with Live Site monitoring and operating in DevOps environment.
